

ABS LABOUR FORCE SURVEY
DEC 1984

GRP911

0001

The figure consists of three side-by-side screenshots of the MATLAB command window, each showing the execution of the 'myfft' function with different input data. The first screenshot shows the function being called with a vector of 10 elements. The second screenshot shows the function being called with a vector of 10 elements. The third screenshot shows the function being called with a vector of 10 elements.

Figure 1 consists of three panels, (a), (b), and (c), each showing the evolution of the probability distribution $P(x)$ for different values of α . The plots show $P(x)$ on the y-axis (ranging from 0 to 0.001) versus x on the x-axis (ranging from 0 to 100). The distributions are shown for $t = 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10$. The distributions are unimodal and shift to the right as t increases. The peak height decreases as t increases. The distributions are also shown for $\alpha = 0.5, 0.7, 0.9$.

Panel (a) $\alpha = 0.5$

x	$t=0$	$t=1$	$t=2$	$t=3$	$t=4$	$t=5$	$t=6$	$t=7$	$t=8$	$t=9$	$t=10$

Figure 1 consists of three subplots labeled (a), (b), and (c), each showing the evolution of the number of nodes in the network over time. The x-axis for all plots is 'Time (days)' ranging from 0 to 100. The y-axis is 'Number of nodes' ranging from 0 to 100. Each plot includes a legend for 'Nodes' (represented by a blue line) and 'Edges' (represented by a red line). In all three plots, the number of nodes increases over time, while the number of edges remains relatively low and stable. Plot (a) shows a steady increase in nodes, reaching 100 by day 100. Plot (b) shows a similar increase but with more fluctuations, reaching 100 around day 100. Plot (c) shows a rapid increase in nodes, reaching 100 within the first 20 days, followed by a slight decrease and then a plateau.

Figure 1 consists of three panels, (a), (b), and (c), each displaying time series data for the 1968 Hong Kong influenza pandemic. The y-axis for all panels represents the number of cases (N) and deaths (D). The x-axis represents time in years. Panel (a) covers the period from 1967 to 1969, showing a sharp increase in cases starting in late 1967, peaking in early 1968, and then declining. Panel (b) covers the period from 1968 to 1970, showing a second wave of cases peaking in early 1969. Panel (c) covers the period from 1969 to 1971, showing a third wave of cases peaking in early 1970. In all panels, the number of cases (N) is represented by a solid line and the number of deaths (D) by a dashed line. The data shows a clear seasonal pattern with peaks occurring in the spring and autumn months.

Figure 1 consists of three panels, (a), (b), and (c), each showing the evolution of the probability distribution $P(x)$ for different values of α . Each panel contains a plot of $P(x)$ versus x and a table of values.

Panel (a) is for $\alpha = 0.5$. The plot shows a distribution that is skewed to the right. The table of values is as follows:

Figure 1 consists of two side-by-side plots showing the time evolution of the probability distribution $P(x)$ for the 1D Ising model. The left plot is for the ferromagnetic case ($J=1, K=0$) and the right plot is for the antiferromagnetic case ($J=-1, K=0$). Both plots show $P(x)$ on the y-axis (ranging from 0 to 1) versus x on the x-axis (ranging from 0 to 100). The distributions are shown for times $t=0, 10, 20, 30, 40, 50, 60, 70, 80, 90$, and 100 . In the ferromagnetic case, the distribution starts as a single peak at $x=0$ and spreads out. In the antiferromagnetic case, the distribution starts as a single peak at $x=0$ and spreads out, but with a different shape.

Figure 1 shows two side-by-side photographs of a 10x10 grid of numbers. The left image is the original, and the right image is a grayscale version of the same grid. The numbers are arranged in a 10x10 grid, with the first row containing 1 through 10, the second row 11 through 20, and so on, up to 91 through 100 in the last row. The numbers are printed in a standard font, and the grid is enclosed in a thin black border.

Figure 1 consists of four scatter plots, labeled (a), (b), (c), and (d), arranged in a 2x2 grid. Each plot has 'Number of children' on the x-axis and 'Number of children in household' on the y-axis. The data points are represented by small squares. Plot (a) shows a positive correlation, plot (b) shows a negative correlation, plot (c) shows a positive correlation, and plot (d) shows a negative correlation.

The image displays a grid of 48 small, low-resolution images, likely from a textbook or workbook. Each image contains a mathematical problem or solution, often involving algebra, geometry, and trigonometry. The problems are numbered and include various diagrams and calculations. The images are arranged in a grid, with some images showing multiple problems or solutions.
